

echoeSTATION™ PS

A PC-based display workstation application rendering softcopy and hardcopy x-ray, MR, CT and arthroscopy files with full feature functionality. A diagnostic viewing solution affording users significant flexibility when a companion to a low demand CR or when mobility is required. For clinical situations requiring low demand archive and workflow features.

echoeSYSTEM™ Basic

For practices with low to moderate demand archive and workflow requirements. A client/server solution affording sophisticated archive and workflow options when web access and collaboration options are not a requirement. Multiple portable media options extend utility beyond the practice premises to meet surgical and other remote access needs.

echoeSYSTEM™ Pro

For practices with moderate to high demand archive, workflow, web access and collaboration requirements. A client/server solution affording high availability options with exceptional archive preservation and access features. The echoeSYSTEM™ Pro component options deliver layers of failover options for the large and active orthopedic office.

echoeSYSTEM™ Enterprise

For the multi-site enterprise practice with requirements to unify archive and workflow across all locations. The filmless and paperless orthopedic enterprise deploying echoeSYSTEM™ Enterprise frees the surgeon and the patient to schedule visits across any and all the clinical locations in the enterprise. The expanded sub-specialist's encatchment and timely treatment follow through bring increases in both patient and surgeon satisfaction ratings.
